

INTELLIGENT PROCESS AUTOMATION

The best platform to **create** your process model.

Revier is the no-code Intelligent Process Automation platform built for enterprises that need to move faster than their systems can be re-written. Map your business, model the journey, deploy on any channel — and change it again tomorrow.

NO CODE

Model, don't rewrite

ANY CHANNEL

Web, mobile, WhatsApp

YOUR RULES

Business-led design

THE PLATFORM

The no-code Lego blocks of business process.

Your organization has already spent millions on the features inside its current systems. Re-writing those features every time the business changes is a headache — and the root cause of most failed transformation programs. Revier takes a different approach: it integrates your existing features as re-usable **Actions**, then gives business leaders a visual canvas on which to assemble them into the processes you actually need today.

Figure 1 — The Revier platform ecosystem: six capabilities, one orchestration layer.

THE CHANNEL MASTER

One process. Every channel. Zero compromise.

Releasing a new channel usually becomes a big decision because of the overhead that goes along with development and deployment. Revier changes this entirely — flows adapt based on the incoming channel (Web, mobile, WhatsApp, Telegram) while the same business rules are enforced behind the scenes. If the process is designed correctly, any channel can interface with it — and the deployment of a new channel becomes as easy as falling out of bed.

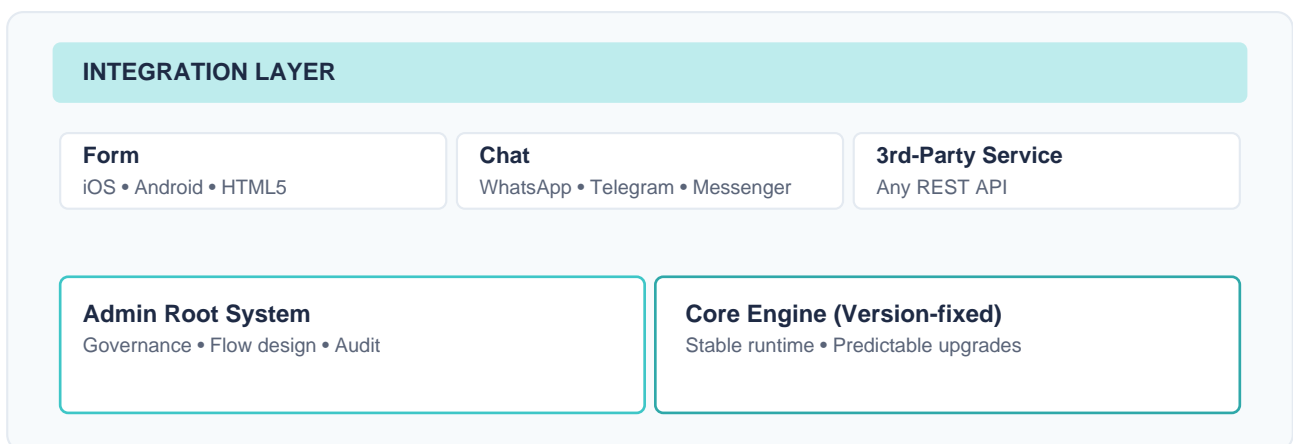

Figure 2 — Integration layer and version-fixed core: deploy new channels without touching the engine.

A COMPETITIVE EDGE — DESIGNED-IN

Revier's no-code integration and modelling interface keeps you ahead of the market — not behind the release calendar.

CUSTOMER JOURNEY TRACKING

See where customers stall — then re-shape the journey in moments.

Revier's built-in engagement reports show exactly where customers are dropping off or getting stuck. Because the journey itself lives in the no-code designer, you can change it in moments — eliminating bottlenecks without opening a change request with IT.

RECYCLE INTERFACE

Keep your brand fresh without a back-end rewrite.

A lightweight presentation layer lets you refresh the look and feel of every customer touchpoint on short notice. No massive overhead, no production risk, no waiting for the next release train — the system you present today is the system your brand needs today.

BUSINESS ALIGNMENT

Wrap the system around the business — not the other way round.

Most platforms force your business to bend to their schema. Revier inverts the relationship: it flexes around your business and its rules so strategy and technology finally move in lockstep, quarter after quarter.

BUSINESS OUTCOMES

Eight measurable wins, delivered by the platform.

01 Compliance Made Easy

Regulation shifts every day. Revier lets you re-integrate and change compliance rules through the no-code graphical interface — so every channel stays compliant the moment you click Save.

02 Streamlined Processes

With the graphical designer at your fingertips, you can change, test and iterate processes instantly — giving you the utmost power over what happens, when and why, in your organization.

03 Time & Money Saved

Automating processes previously done through human intervention frees your people to focus on higher-value, more fruitful day-to-day operations.

04 Operational Efficiency

With all your processes in Revier, every flow executes in record time, in the right order, every time — eliminating the need for constant manual review and audit.

05 Reduced Operational Waste

Mapping a process end-to-end surfaces unnecessary activities immediately, so you can eliminate them and keep the organization lean.

06 Empowered Management

Not every leader is technology-savvy. Through simple process modelling, complicated flows can be reviewed — and changed — by management without needing to understand the mechanics underneath.

READY WHEN YOU ARE

Stop re-writing systems. Start re-shaping them.

See how leading organizations use Revier to turn months-long change projects into an afternoon of modelling. Our team will walk you through a live Flow Designer session built around one of your own processes.
